

Email submission on draft determination of notified electricity prices

15 May 2024

M. Knight, 4350 QLD

In the interest of helping to maximise use of solar PV generation I shifted to the residential 12c tariff. Five months later you intend to increase 90% of my electricity usage charges by 15% whilst cutting the peak time 10% of my usage by 4%. This is unfair, the 12c tariff should remain with the existing prices or lower. Over time I would expect the shoulder price to increase and the off peak to decrease as this will eventually become the most efficient arrangement.

Thanks for the opportunity to provide feedback.
